Transcendent Mind: Rethinking The Science Of Consciousness

Synopsis

Everyone knows that consciousness resides in the brain. Or does it? In this book, Imants Barus and Julia Mossbridge utilize findings from quantum mechanics, special relativity, philosophy, and paranormal psychology to build a rigorous, scientific investigation into the origins and nature of human consciousness. Along the way, they examine the scientific literature on concepts such as mediumship, out-of-body and near-death experiences, telekinesis, "apparent" vs. "deep time," and mind-to-mind communication, and introduce eye-opening ideas about our shared reality. The result is a revelatory tour of the "post-materialist" world and a roadmap for consciousness research in the twenty-first century.

Book Information

Hardcover: 256 pages

Publisher: American Psychological Association (APA); 1 edition (August 15, 2016)

Language: English

ISBN-10: 1433822776

ISBN-13: 978-1433822773

Product Dimensions: 7.2 x 0.8 x 10.2 inches

Customer Reviews

Once upon a time, not so long ago, there was a kingdom called Science whose citizens were guided by a uniform belief that their consciousness is produced by the chemistry, physiology, and anatomy of the physical brain. Forfeited in this belief was the capacity for free will, as well as any higher meaning and purpose to existence. The possibility that consciousness might survive the physical death of the brain and body was considered heretical and blasphemous. Enormous pressure was exerted on the guardians of science to conform to the concept of materialism undergirding this precious belief system. In support of these beliefs, the centurions of science marshaled enormous bodies of data that, they were convinced, confirmed their views. They were so emphatic in their position that data to the contrary were largely dismissed as irrelevant, and those who dared to challenge the materialistic perspective were often denigrated as traitors to the

scientific tradition. But just when the materialistic perspective was considered beyond reproach and safe from significant challenge, there came this shocking announcement from two prominent consciousness researchers: "We are in the midst of a sea change. Receding from view is materialism, whereby physical phenomena are assumed to be primary and consciousness is regarded as secondary. Approaching our sights is a complete reversal of perspective. According to this alternative view, consciousness is primary and the physical is secondary. In other words, materialism is receding and giving way to ideas about reality in which consciousness plays a key role." • This is the opening salvo of *Transcendent Mind: Rethinking the Science of Consciousness* (page 3).
