Synopsis
This engaging, user-friendly text guides occupational practitioners and students toward creatively
designing and implementing occupation-based interventions for people with disabilities. The book
covers the three primary proficiencies: understanding occupation in context, developing design
skills, and applying occupation in practice. This innovative approach focuses on the interactive
process of designing client-centered interventions, building a bridge between occupational science,
and its application in occupational therapy. "After briefly looking over the book, it appears to be a
great book for a basic OT theory course or intro course." -- Claudia Miller, MHS, OTR/L, Cincinnati
State College, Cincinnati, Ohio "This is a good (very good!) text. It will help us introduce
the philosophical and theoretical notions of occupation (as process and outcome) when students
enter as freshmen and then continue to reinforce these concepts throughout the time they are in the
OT program." -- Jacquelyn Bolden, PhD, OTR/L, Florida A & M University, Tallahassee, Florida

Customer Reviews
The book itself was an easy read. I did not find any of the information useful as to it had already
been covered in my course of study, but this could have just been due to the organization of my
school's curriculum

Good read
